

"I have a specific client, Mallory, that came into our clinic with noticeably deep acne scarring on her checks. We tried 3 deep skin resurfacing treatments with the erbium yag laser, one deep skin resurfacing with the CO2 laser and multiple treatments of aggressive peels. Those are just the treatments our clinic has performed on her. She has had multiple treatments at other clinics I am just unaware of details of those treatments. After all of that she still had noticeable deep scarring I knew if anyone was going to see any results with the Dermapen I wanted it to be Mallory. I was happy she was willing to come in and let me try the treatment on her. After just one treatment she was calling me asking when she could be treated again. After all of the treatments she has done in the past, all it took was one treatment for her to see a difference. It was amazing to me. After 4 treatments I will say I can still see mild acne scars, but I am confident with a few more treatments Mallory will continue to be even more satisfied, as will I. It has been amazing to do a treatment and send a client away not worried about what they are going to look the the next day or when they will call you asking questions if what they are going through is normal or not. Mallory has been so pleased to do the treatment and go back to regular life, no down time, no time off work, no looking scary (all the things we hate to worry about!) I am excited to start offering the Dermapen to the clients of our clinic and continue to improve the way people feel about the way they look! Thanks, Dermapen!"

"I believe the Dermapen to be an excellent addition to any dermatological or aesthetic medical practice. Micro-needling is an established treatment modality with known benefits. The unique Dermapen automatic micro-needling device adds new versatility with adjustable needling depth, treatment intensity, increased efficiency and the option to focus treatments on troubled areas. The device may also enhance the delivery of medical and cosmeceutical products to a more effective level in the skin. I see the Dermapen as a primary or adjunctive treatment for skin rejuvenation, scars, skin texture, fine wrinkles, and abnormal pigmentation. I also believe the Dermapen will potentially improve the outcome of many of my laser procedures. I have personally experienced the benefits of the Dermapen."

"A new technology lets you treat and tighten your skin with no lasers, no downtime, and for a fraction of the cost. Dr. Justin Johnsen with Utah Eye and Facial Plastic Surgery explains how the Dermapen can improve your appearance for a lot less than other treatments."

"I had this treatment done last week and it was great!! Very minimal pain and discomfort. My skin felt incredible after, it looked and felt tighter and the tone was noticeably more even all over. I love how, depending on your skin concerns, you can put specific serums on and the Dermapen penetrates the product into different layers of the epidermis and dermis getting the ultimate efficacy of the product. Loved it!! Can't wait for my next treatment!"

Amelia M. - Master Aesthetician / Admin

Utah Eye and Facial Plastic Surgery

"I have absolutely loved my experience with Dermapen so far. I have looked forward to every treatment. One of the things I have loved most about Dermapen is that I have been able see

results right away. Having had quite a few other treatments before Dermapen to treat my acne scars, I really felt that this treatment made a lot of sense and I loved the results. One of the other things I have appreciated about this treatment is the recovery time. I am able to go to work and live my everyday lifestyle without feeling or looking any different. Dermapen is a practical, painless and sensible treatment option. I would recommend it to anyone."

Mallory M.

"I was so happy with my first Dermapen treatment. Immediately my skin was significantly softer and two days later I felt like my skin was glowing. I went out without foundation because I didn't feel like I needed it! I would definitely get a Dermapen treatment again and look forward to the results after multiple treatments!"

Kathryn S.

"The redness went away in a few days and I was pleased with the results, as there appears to be improvement in the lines around my eyes."

Leslie S.

"Yesterday evening I had my first Dermapen treatment. For full disclosure purposes, I will tell you that I received this treatment at no cost courtesy of Dermapen co-owner, performed by Dr.

Justin Johnsen of Utah Eye and Plastic Surgery. As this is an emerging technology I was approached to pilot the treatment as a test case and give my HONEST feedback. So... now that we have the formalities out of the way let me tell you about it. And bonus, I have lots of gory pictures (ughhhh) - so enjoy!!!"

"The Dermapen treatment triggers collagen production through a micro-needling technique. It can be used to improve scarring (acne scarring & keloid scars), hyperpigmentation & stretch marks. It can also be used to retexturize the skin. The Dermapen can also help with skin tightening!"

"The Dermapen is great! It didn't hurt at all and I could go back to work without an embarrassing red face. My skin felt so soft and fresh the next day. I'm excited to now see my wrinkles start to fade away."

Casey S.
